# Snort

## Overview

Snort is an Intrusion Detection System add-on package for ImageStream Linux. Routers running Snort can detect, log and provide alerts for network-based intrusion attempts.

A complete IDS setup consists of:

- ◇ Snort sensor running on an ImageStream Router
- ◇ Alert and Logging Collector
- ◇ Front-end for reporting on alerts.

The Snort add-on requires the add-on hard drive service to be configured and running prior to installation.
